DETAILED ACTION

Amended claim 1 and cancelled claims 2-5, filed 5/2/06, are acknowledged.

APPLICANTS' ARGUMENTS

Applicants' arguments, filed 5/2/06, have been fully considered and are deemed to be persuasive.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The invention is directed to a process for high throughput screening of binding of ligands to macromolecules using high resolution powder diffraction data involving slurry samples. The reasons for allowance focus around the "slurry" samples of polycrystalline macromolecule material comprising a protein that are used to obtain the high resolution powder diffraction patterns of in the instant invention. The term "slurry" is interpreted to have free solvent present during the diffraction data capture steps. One of skill in the art would reasonably interpret the slurry to include a significant amount of solvent beyond what would be utilized in traditional powder diffraction techniques. Some excess liquid is removed, as stated in the instant specification on page 9 (lines 2-3), but without any active drying step. Although performing powder diffraction with dry samples is found in the prior art (i.e. US 5,268,162), performing a ligand binding screening process using high resolution powder diffraction data from slurry samples of polycrystalline material comprising a protein is not found in the prior art. The lack of

scope of enablement rejection for claim 1, mailed 11/2/05, was overcome by the amendment to instant claim 1 limiting the polycrystalline macromolecule material to comprise a protein.

Because no outstanding rejections remain, the claimed invention is deemed allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably **accompany** the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
